DESCRIPTION

Here we have for sale is a fine example of the iconic Vw transporter T5.1 LWB in a stunning red colour, this van has recently been converted into a 2 berth camper van, on the outside it has chrome side bars, roof bars and dark privacy glass windows, with chrome trim all around the van. there are colour coded rear bumpers and front splitter with intergrated fog lights and DLRs, It comes with brand new alloy wheels and tyres, new wiper blades, new clutch and flywheel, brand new mot and full service history Inside we have the very popular Smev 9722 cooker and sink and Dometic CRX50 fridge with removable freezer compartment, there is a crash tested bed (so 4 people can travel when not camping) with built in drawer for storage, there is a top shelf for small items with led lights above and below it, and two reading lights with built in usb chargers and small cargo nets to hold your phone above the bed, plenty of storage below incorporating cold water and waste water containers and gas box with regulator and bottle included, there's 200 led lights in the ceiling that twinkle like stars in the dark which look amazing (see video) front leather seats with matching leather on the bed. Cherry red and grey cabinets with solid oak worktop. 12volt and 220volt outlets. This van is 11 years old but has been lovingly cared for and driven properly by myself for many years and has been serviced properly so please don't be put off by the mileage as these vans go on forever (especially when looked after) there are the usual dents and scratches and chips you would

Volkswagen Campervan 2012**Price £19,950**

expect from a vehicle of this age but I think you'll find it's better than most. The worst points on the body are a dent on the bonnet (easily covered with a bonnet bra) and a small dent on the tailgate, see photos for bonnet but couldn't really see the tailgate on a photo. In the rear compartment as well as the items listed below includes a 110ah battery and 1000W Renogy inverter with remote control and built in automatic transfer switch The CBE PC380 kit is an all-in-one, 12V installation kit built around the stylish PC380 digital control panel and provides all the major components required to get your leisure electrical system up and running in your campervan or motorhome. The microprocessor-controlled PC380 control panel provides a host of functions for controlling and monitoring your electrical system and features a sleek, modern 4.8"12-colour negative LCD display. This kit is designed for use with lead-acid leisure batteries (not suitable for lithium) in vehicles with standard alternators (Euro 4 spec engines or earlier), although it can be modified to enable it to be used with 'smart' alternators (Euro 5 or 6 spec engines). Please see 'important note' below. The CBE PC380 kit contains the following components: PC380 digital control panel with 4.8" display DS300 12V fused distribution box DS120S 230V AC mini consumer unit with double pole 13A circuit breaker and RCD CB-516 16A 4-stage automatic battery charger Pair of screw probes for waste water tank level sensing Freshwater probe Internal and external temperature sensors Wiring harnesses, connector blocks and terminals The PC380 control panel provides the following functions: Voltmeter for checking starter and leisure battery health Internal and external temperature display Digital clock with alarm Indication of 240V mains connection Fresh water tank level indicator Fresh water tank 'empty' indicator Waste water tank 'full' indicator Audible freshwater tank refill indicator Audible button tones Internal & external temperature indicators Engine ON indicator Split charging indicator Starter battery over-discharge alarm Leisure battery over-discharge alarm 240V mains power ON indicator Awning light on/off switch Interior lights and heater on/off switch Water pump on/off switch Main power on/off switch Battery over-discharge protection Twilight function to dim display The DS300 12V fused distribution box provides the following functions Fused distribution for 10 circuits Split charging of leisure battery (lead-acid batteries only) Trickle charging of the starter battery (max. 2A) from mains charger Automatic control for 3-way fridge and electric step Connection point for solar panel controller (not included)
